Improvements & Bug fixes

UI backend

- Re-written the entire UI backend

Other

- Fixed a bug in the IMAP server where emails were duplicated on the server if a user without write access to an email attempted to do an append command to it.
- Updated Apache to version 2.4.51
- Added security improvements to the Apache server
- Updated PHP to version 7.4.26
- Fixed a bug where the system path variable wasn't properly handled if it's more than 800 characters
